MUSK OX

MINIMUM SCORES

90

A & B DO NOT CALCULATE IN THE FINAL SCORE BUT ARE REQUIRED		SEE OTHER SIDE FOR SCORING INSTRUCTIONS		Column 1	Column 2	Column 3
		A. Greatest Spread		Right Horn	Left Horn	Difference
		B. Tip-to-Tip Spread				
		C. Length of Horn				
		D-1. Width of Boss				
		D-2. Width at First Quarter	Location of First Quarter Width: _____			
		D-3. Circumference at Second Quarter	Location of Second Quarter Circumference: _____			
		D-4. Circumference at Third Quarter	Location of Third Quarter Circumference: _____			
		TOTALS				
ADD TOGETHER:	Column 1		Exact Locality Where Killed:*	County:	State/Prov:	
	Column 2		Hunter (Legal Name):		Date Killed:	
Subtotal			Trophy Owner (Legal Name):		Telephone #:	
SUBTRACT:	Column 3		Trophy Owner's Address:			
FINAL SCORE			Trophy Owner's Email:		Guide's Name:	
			Remarks (Mention Any Abnormalities or Unique Qualities):			
		*Geographic location (lake, mountain, river, etc.) required for trophies taken in Canada and Alaska.				

B & C, P & Y, or B & Q Club® Official Measurer I.D. Number

No part of this scoring system may be altered in any way. *This score chart has been altered with the express written permission from the Boone and Crockett Club.* A score chart is not authenticated until signed and dated by a B&C, P&Y, or B&Q certified Official Measurer. No scores are official Bolt & Quarrel Club scores until verified and the trophy is accepted by the Bolt & Quarrel Clubs Records Program. All trophy entries into the Bolt & Quarrel Club Records Program are subject to verification.

BOLT & QUARREL CLUB[®] INSTRUCTIONS FOR MEASURING MUSK OX

All measurements must be made with a 1/4-inch wide flexible steel tape and adjustable calipers to the nearest one-eighth of an inch. Enter fractional figures in eighths, without reduction. Official measurements cannot be taken until the horns have air dried at a habitable room temperature for at least 60 days after the animal was killed. The 60-day drying period for a trophy that has been frozen or boiled begins the day it is removed from the freezer or boiling pot, or submersion in any liquid.

- A. Greatest Spread** is measured between perpendiculars at a right angle to the center line of the skull. **Greatest spread does not add into the final score.**
- B. Tip-to-Tip Spread** is measured between tips of horns. **Tip-to-tip spread does not add into the final score.**
- C. Length of Horn** is measured along center of upper horn surface, staying within curve of horn as illustrated, to a point in line with tip. Attempt to free the connective tissue between the horns at the center of the boss to determine the lowest point of horn material on each side. Hook the tape under the lowest point of the horn and measure the length of horn, with the measurement line maintained in the center of the upper surface of horn following the converging lines to the horn tip. A flexible steel cable may be substituted for the 1/4-inch steel tape for this measurement only.
- D-1. Width of Boss** is measured with calipers at greatest width of the boss, with measurement line forming a right angle with horn axis. It is often helpful to measure D-1 before C, marking the midpoint of the boss as the correct path of C.
- D-2-3-4. Divide measurement C** of longer horn by four. Starting at base, mark both horns at these quarters (even though the other horn is shorter). Then, using calipers, measure width of boss at D-2, making sure the measurement is at a right angle to horn axis and in line with the D-2 mark. Circumferences are then measured at D-3 and D-4, with measurements being taken at right angles to horn axis.
